

# Monolith vs Microservices

## Monolith.

one big single project.

both of by company using monolith

Build Small - Small different Project I

what is mean by Service → Service, Project, application they are one and the same thing.

## Monolith

## Microservices

- Dev Speed Slower

Faster.

- Code Rep		
- Scalability	Tough to Scale	eases to Scale.
- Deployment	(Easy to deploy) depends. Restrictive	(tough to deploy) depends Advantage and disadvantage
- Tech Stack	Lower (easier)	higher. (tougher)
- Infrastructure	It depends on size good for small	good for Big size as scale cases.
- Complexity	Tough	
- Fault Isolation	Tough	
- Testing	Tough cases end to end	easy tough. end to end
- Ownership	Central ownership	ownership of small team.
- Maintenance	tough to maintain	eases to maintain
- Debugging	debugging costs	tough.
- Rewriting	goes tough	easy

what happens in Nomask dev. com ??
